pH UP

Product Data Sheet

Product Description:

- Raises the pH of swimming pool water

Product Data:

Physical state: solid

Specific Gravity: 2.533

pH 1% solution: 11.3

Vapour pressure: no data

Boiling point: no data

Freezing point: no data

Solubility in water: 17%

Evaporation rate: no data

Odour and appearance: odourless, white powder.

Directions:

Proper pH balance is an essential part of pool maintenance. The recommended range is 7.4 to 7.6. If the pH of your pool is low (below 7.4), the water will be acidic. Discomfort from skin and eye irritation could develop. This condition also causes the chlorine to become unstable, and therefore less effective in killing bacteria, algae and in the disintegration of organic matter.

DIRECTIONS: When test readings indicate a pH below 7.4, the following should be consulted:

pH Reading	50,000 Litres	100,000 Litres	150,000 Litres
Below 6.6	500 g	1 kg	1.5 kg
6.6 -7.0	375 g	750 g	1.0 kg
7.0 - 7.4	250 g	500 g	.75 kg

pH UP is readily soluble in water. It may be broadcast on the pool surface. It requires four hours to determine if pH is within recommended range. Repeat if necessary. The pool may be used immediately following treatment.
